

TUTORIAL 6

PERIODIC FUNCTIONS

1. Define analytically the periodic functions shown

2. Sketch graphs of the following, inserting relevant values

(a) $f(t) = t^2 \quad 0 \leq t \leq 1$
period 1

(b) $f(t) = \begin{cases} t^2 & -1 \leq t \leq 0 \\ t & 0 \leq t \leq 1 \end{cases}$
period 2

(c) $f(t) = \begin{cases} \sin t & 0 < t \leq \pi \\ 0 & \pi < t \leq 2\pi \end{cases}$
period 2π

(d) $f(t) = \begin{cases} \frac{t^2}{4} & 0 < t \leq 4 \\ 4 & 4 < t \leq 6 \\ 0 & 6 < t \leq 8 \end{cases}$

$f(t) = f(t+8)$
i.e. period 8

Note: This is also written

$$f(t) = \begin{cases} \sin t & 0 < t \leq \pi \\ 0 & \pi < t \leq 2\pi \end{cases}$$

$$f(t) = f(t+2\pi)$$

Period $T=2\pi$
